January 26, 2008

Dear _____,

I am honored to have the opportunity to assist Northern Arizona University research scientists with their methanol project. We have the unique opportunity to conduct a 'real world' application using the CO₂ emissions created from the fermentation process at Mogollon Brewing Co. It is our goal to produce enough M-10 blend to fuel all of the NAU staff vehicles from the CO₂ emissions produced here at Mogollon Brewing Co. using the technology created from your research.

If this technology were to be scaled up and applied to the existing ethanol, wine and distillation industries, we could produce billions of gallons of methanol and at the same time eliminate thousands of tons of CO₂ being released into the atmosphere every day. This would greatly reduce our dependency on foreign oil, improve our local and national economies and greatly reduce harmful carbon monoxide emissions from our vehicles.

It is both an honor and a pleasure to be able to assist you with your research.

Sincerely,

David R. Williamson
President
Mogollon Brewing Company
Arizona High Spirits Distillery
